## **IUPAC Project Progress Report**

Date: July 2007

Task Group Leader: Staffan Sjöberg

**Project number:** 1999-050-1-500

Project Title: Chemical Speciation of Environmentally Significant Heavy metals and

Inorganic Ligands

## Report:

1. Current status of project:

The present project can be regarded as consisting of 5 +1 subprojects (5 +1 papers). The first two subprojects (the Hg(II) and Cu(II) systems) are completed and published in PAC. The third one (the Pb(II) system) is planned to be finalized by the end of this year.

- 2. Progress relative to 'milestones':
- 3. Difficulties encountered (or concerns):

To keep up with the time Table

- 4. Projected completion date (documents ready for external review): Next subproject is estimated to be completed by the end of 2007. After that we will need some additional two years before the Cd(II) and Zn(II) systems will be completed.
- 5. Please list all of the intended outputs and the dissemination plan for this project (viz. articles, CD, conference presentations; etc.). These may have been expanded since project approval: There is no change in this respect.
- 6. If your project is within 6 months of completion, how do you plan to utilise any remaining budget for this project?

The project will not be completed within the next 6 months. Therefore we do not plan any changes with respect to the budget. The remaining budget will be needed to cover travel costs within the project.

7. Work on this project may have identified new problems, issues, challenges, emerging topics, opportunities for related projects, etc. Please indicate these here so that the Division can follow up on them:

There is an obvious need for critically evaluated thermodynamic data on different metal ion - organic ligand systems.
